General

Type:
1 x 4 Linear Array

Lens Profile:
Spherical

Note:
Linear arrays are centered on the part and surrounded by inactive lenses.

Physical & Mechanical Properties

Diameter (mm):
0.53 (of each lens)

Clear Aperture CA (mm):
0.42 (of each lens)

Dimensions (mm):
4.45 x 2.20 ±0.02

Radius R (mm):
1.119 ±3%

Thickness (mm):
0.50 ±0.025

Optical Properties

Substrate:
Silicon

Coating:
BBAR (1250-1620nm)

Wavelength Range (nm):
1250 - 1620

Coating Specification:
R_{avg} ≤0.5% @ 1250 - 1620

Design Wavelength DWL (nm):
1310

Pitch (µm):
750 ±0.3

Working Distance (mm):
0.304

Mode Field Diameter (mm):
Source: 0.003
Target: 0.25

Regulatory Compliance

Certificate of Conformance:
View

Country of Origin:
Switzerland

Product Details

- Fused Silica and Silicon Substrates
- 1x4 and 1x8 Lens Array Configurations
- Ideal for Fiber Coupling and Collimating

Linear Microlens Arrays are available in fused silica and silicon substrates with linear arrays of either 4 or 8 lenses. Silicon has a high index of refraction, enabling short focal length, high-NA lens array designs, while fused silica offers excellent thermal stability and visible transmission to facilitate easy alignment. Linear Microlens Arrays are used to collimate and couple fiber arrays in fiber-to-fiber or laser-to-fiber applications, such as with semiconductor laser diodes. These lenses are AR coated for the near-infrared (NIR) with designs for 1310 and 1550nm, making them ideal for use with NIR lasers or in telecommunications.
