General

Bandpass Filter **Type:**

Physical & Mechanical Properties

12.50 +0/-0.25 **Diameter (mm):**

9.0 **Clear Aperture CA (mm):**

5.90 **Thickness (mm):**

Mounted in Black Anodized Ring **Construction:**

Optical Properties

Center Wavelength CWL (nm):
850.00

Center Wavelength CWL Tolerance (nm):
+10/-0

Full Width-Half Max FWHM (nm):
40.00

Full Width-Half Max FWHM Tolerance (nm):
±8

Minimum Transmission (%):
80

Coating:
Traditional Coated

Blocking Wavelength Range (nm):
1x10⁻⁴ avg. X-Ray to 1200nm

Environmental & Durability Factors

Operating Temperature (°C):
-50 to +70

Regulatory Compliance

RoHS 2015:
[Compliant](#)

Certificate of Conformance:

Product Details

- Passband Transmission up to 80%
- 441.6 to 1064nm Wavelength Options with 10, 20, and 40nm Bandwidths
- Ideal for Medical and Analytical Applications

High Transmission Traditional Coated Bandpass Filters are designed for situations where far-infrared blocking is not required, allowing for up to 80% transmission in the passband region and good blocking over the visible and NIR wavelength range. Featuring popular laser, mercury, biomedical, and analytical spectral lines, these filters cover a wide range of visible and NIR wavelengths. A hermetic seal and an anodized metal mount help maintain performance in high humidity environments and protect against chipping and scratching. High Transmission Traditional Coated Bandpass Filters are ideal for a range of scientific and medical applications such as spectral radiometry, medical diagnostics, chemical analysis, and Colorimetry. For applications requiring wider blocking ranges, [traditional coated bandpass filters](#) are available whereas applications requiring higher transmission above 90% are best served with [hard coated bandpass filters](#).
