- 3 Primary Magnification Range Options
- Working Distance from 25mm to Infinity
- Optional **LDL** Doubler Tube Boosts Magnification 2X

The InfiniMite™ Imaging Lenses are available in 3 lens power ranges. The standard version uses an integral focus lock as a friction brake to lock the magnification/focus setting in place. Designed with input from specialists in the field, its miniature size allows the InfiniMite™ to be integrated into a wide variety of electronic imaging conditions. The length of the lens does not change when focusing. InfiniMite™ Imaging Lenses were designed to provide specific working distance and field of view combinations when using 1/3" format sensors, but the lenses can be used with sensors up to 2/3" format.

The main lens, the Alpha, covers a 0.75- 0.08X range for macro use, whereas the Beta and Gamma versions offer a working distance (WD) shift from the high-magnification end of the Alpha. For example, with a 1/2" sensor, the Alpha gives a 1/2" field of view (FOV) at 40mm WD at 0.5X Lens magnification (PM); at the same PM & FOV, the Beta has a 60mm WD and the Gamma has a 122mm WD. The three lens options offer unprecedented flexibility in system integration.
